Go Beyond Surface Clean. Clean Air, Cleaner Facility.

Why Pure Air Control Services?
PURE + AeraMax Professional commercial-grade air purifiers are engineered to clean the air where it’s needed most. Patented EnviroSmart™ technology responds to the environment, allowing for efficient and low-maintenance operation.

EnviroSmart Technology
Intelligent sensors detect sound, motion and odor to assess a room’s occupancy and condition, automatically adjusting to optimize performance, reduce energy consumption and extend filter life.

Seamless Integration
The air purification units are designed to seamlessly and safely integrate into your facility’s environment. Units are unobtrusive and aesthetically-pleasing, mounting easily on any wall.

HOW IT WORKS
AeraMax Professional cleans the air in four steps:
A pre-filter captures and removes large particles and contaminants
1. Carbon filtration adsorbs odors and VOCs
2. True HEPA filtration traps 99.97% of any remaining airborne pollutants*
3. Anti-microbial treatment e HEPA filter effectively reduces the development of bacteria and fungi on the filter
4. PlasmaTrue™ Bipolar Ionization electrically charges airborne particles to enhance filtration

Benefits of the 4 Stage HEPA Filtration:
AeraMax Professional air purifiers have helped facility managers in corporate, education, assisted living, healthcare and other industries maintain a higher quality of facility.
The technology is designed to complement HVAC systems by filtering air at the source of the contaminant. Also, most HVAC systems do not utilize HEPA Filtration, which captures airborne contaminants as small as 0.3 microns including viruses, bacteria, and other airborne contaminants. Within the technology, the 4 stage filtration has EnviroSmart patent that detects sounds, motion, and odor within the room to automatically adjust the performance.

AERAMAX PRO AM II
Cleans Up To 300 Sq. Ft

AERAMAX PRO AM III
Cleans Up To 700 Sq. Ft

AERAMAX PRO AM IV
Cleans Up To 1400 Sq. Ft

CERTIFIED BY AAFA
Certified asthma & allergy friendly™ by the Asthma and Allergy Foundation of America.

IMPORTANT PLANNING PRIOR TO INSTALL

Before installing any PURE-Plasma device you will need to ensure that the HVAC system is clean with good baseline conditions. After all, why would you invest in new technology and equipment only to put its operation at a deficit from the start? We have two main services to address this need.

**PURE-Steam**

PURE-Steam is an eco-friendly, hygienic cleaning method for air handling equipment including the cabinet, blower assembly, drain pan and especially the coils. It uses high temperature, low pressure steam in combination with bio enzyme treatments to thoroughly remove fouling and disinfect the unit.

PURE-Steam kills bacteria/viruses, removes particulate/biofilm buildup, adds CFM/Cooling and best of all provides tremendous energy savings!

**PURE-Duct**

PURE-Duct is an IAQ focused, hygienic cleaning of the air conveyance system, including VAV terminals. It uses a combination of HEPA filtered Negative Air Machines (NAM), compressed air, HEPA vacuums and rotobrushes to effectively remove harmful particulates and allergens.

Additionally, the ductwork can be disinfected using electrostatic spray. Ductboard can also be encapsulated to prevent degradation and the spread of fiberglass particles through the system.

**PURE-Plasma**

Our PURE-Plasma Needlepoint Bipolar Ionization solutions include equipment for small residential equipment to large commercial HVAC equipment.

Much like sunlight does in the atmosphere, PURE-Plasma technology produces a natural bio-climate rich in positive and negative oxygen ions. The negative ions contain an extra electron while the positive ions are missing an electron resulting in an unstable condition. In an effort to re-stabilize, these bipolar ions seek out atoms and molecules in the air to trade electrons with, effectively neutralizing particulate matter, bacteria and virus cells, odorous gases and aerosols, and VOCs.
