

PURE-BLUE

Large Volume HEPA Filtration

- Sports Arenas • Convention Centers
- Commercial Office Buildings • Hospitals
- Big Box Stores • Manufacturing Plants

Why Pure Air Control Services?

Pure Air Control Services, Inc. offers a full range of professional solutions to indoor environmental (IEQ) and indoor air quality (IAQ) concerns. We provide turn-key solutions through environmental consulting, engineering and evaluation, building diagnostics protocols, indoor air/contaminant testing, laboratory support services and building HVAC system remediation services.

With over 30 years and 600 million sq. ft. of dedicated experience, the experts at Pure Air Control Services are here and ready to solve your unique IAQ puzzle with minimal downtime and on budget.

HEPA Filtration Specification:

- Modular
- HEPA Staged Filtration
- True TWO-STAGE particule collector
- Backward-inclined radial fans (ultra quiet)
- Unique patented dust collectors system
- Dual fan configurations
 - Whisper electric fans at 10,000 CFM each
- Variable frequency power drives.

Benefits of the Large Volume HEPA Filtration:

Large-volume HEPA filtration machines are designed to alleviate Indoor Air Quality concerns while normal operations or ongoing remediation takes place. These filtration systems are uniquely suited for environments exposed to coronavirus and other pathogens, or contaminants.

The equipment is modular and low profile to accommodate a variety of different needs and applications. The design houses each stack in a separate carrier providing the ability to create customized configurations.

Patented Dust Collection System With Smartbox Technology
